ExpressJS	ReactJS
NextJS	TailwindCSS
Flask	FastAPI
MongoDB	Prisma
Arduino	AWS
BurpSuite	HTTP Toolkits
Postman	Git & GitHub

Language	Usage Percentage (Approximate)
Python	75%
C/C++	75%
JavaScript	75%
TypeScript	75%
Dart	50%
Rust	25%
HTML	50%
CSS	50%

Testing APIs

Video Technologies

Embedded Systems

Networking

Passionate and skilled MERN/PERN stack developer with a strong foundation in web development, API testing, and embedded systems. Extensive experience in identifying API vulnerabilities and reporting them as a White Hat hacker, earning recognition and occasional freelance opportunities. Adept at creating and deploying full-stack applications, contributing to open-source projects, and learning new technologies quickly. Enthusiastic about robotics, with a history of success in national and regional science fairs, including participation in the World Robot Olympiad. Strong background in reverse engineering and cloud deployments, coupled with a commitment to volunteering in social initiatives.

- Built and maintain **GrihoBangla**, a scalable platform connecting property owners with tenants.
- Act as the **sole developer**, handling:
 - Full-stack development
 - Deployment
 - Ongoing maintenance
- Platform designed for **growth**, though currently in the early stages with limited marketing.

- Developed key parts of **Uddhar**, a disaster management platform for handling natural and man-made disasters.
- Contributions include:
 - **Backend**: News section development
 - **Frontend**: Live monitoring feature
 - **CI/CD Pipeline**: Implemented using GitHub and Vercel, ensuring **0% downtime** during updates
- Platform features:
 - **Highly scalable** and fault-tolerant
 - Gained **significant attention** on social media

- **Dual-Backend Dashboard System:** Developed for 40,000+ students across 14 branches, this system streamlines branch management and student results, allowing for efficient operations like course changes, resource distribution, and exam management.
- **Collaborative Development:** Partnered with another developer and a project manager, leveraging diverse expertise to create a scalable and high-performance solution tailored to user needs.
- **Technological Stack:** Built with modern technologies including Node.js, Next.js 15, MongoDB, Express.js, Tailwind CSS, and TypeScript, ensuring a robust and responsive application supported by a RESTful API for seamless communication.
- **Performance and Stability:** The system efficiently handles thousands of concurrent users without requiring Redis caching, demonstrating high stability and performance while providing students and administrators with valuable resources and insights.

- User Login
- Realtime Notification System
- Students have their own profile
- Notice section for notice delivery
- Resources section with books, materials, and other related softwares

- Developed **ChitroAI**, a platform enabling users to generate images using **DALL·E 2** by inputting prompts in various languages.
- Key features and technologies:
 - **Automatic translation** of prompts into English for image generation
 - **Backend**: Built with Flask
 - **Frontend**: Created using HTML, CSS, and JavaScript
- Impact and outcome:
 - Became an **instant hit**, making image creation accessible to non-English speakers
 - Eventually discontinued due to **financial constraints** while offering the service for free

- Developed **MedvisionAI**, an automated vending machine for **medicine dispensing** with advanced features:
 - **RFID-based user identification** for payments
 - **Prescription scanning** for secure medicine dispensing
 - **Camera integration** for **doctor consultations**
 - **Emergency button** to notify ambulances during critical situations
- **Technologies used:**
 - **Hardware Control:** Arduino and NodeMCUs
 - **Backend:** Flask, managing user authentication and purchase logs

Awards

National Champion - BCSIR Science Fest

Bangladesh Council of Scientific and Industrial Research (BCSIR)

March 2023

My team became national champion for MedVisionAI.

Champion

Rajshahi Govt Women's College

February 2023

Became champion for MedVisionAI

Champion

43rd National Science Week

March 2022

Became champion for developing CoVoT

Nationalist

Bangladesh Math Olympiad

2019

Selected for the national round

Nationalist

Creative Talent Hunt 2018

April 2018

Became divisional champion and went to national round

Education

Mawlana Bhashani Science and Technology University June 2024 - Present
CSE Undergraduate

Enrolled

mbstu.ac.bd

New Govt Degree College, Rajshahi March 2022 - September 2023
Science HSC

GPA 5.0

ngdc.ac.bd

Harimohan Govt. High School December 2021
Science SSC

GPA 5.00

harimohanschool.edu.bd

Vulnerabilities Found

ACS

- Found exploit in their exam app that allows a treat actor to get highest mark within few seconds and becoming #1 on leaderboard.
- Found flaw in their agent system (O2O) that allows a threat actor to extract student details that can be used to impersonate him/her.
- Found unauthorized token generation vulnerability that allows one to impersonate and take exam behalf of other students.

Boighor

- Access to all books and audio books without purchasing it.

Chorcha

- Payment API design flaw allowed user to purchase any of their subscriptions with as low as 10 BDT.

CoderVai

- Found flaw in their ``forgot password`` section that allows threat actor to change any users password with just by their phone number.

I have found some more vulnerabilities but as they were reported but not fixed yet, can't disclose it publicly.
